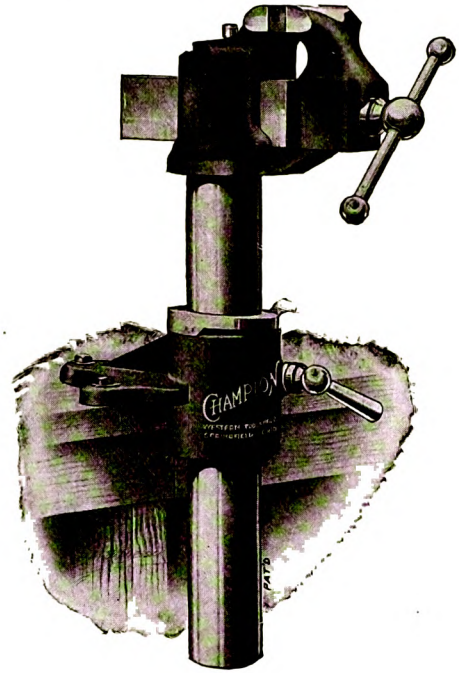
CHAMPION VISES

Hold Your Work on Any Angle



This feature is particularly appreciated by your workmen when working on a job that must be accurate, because they can swivel the vise in a position to obtain good light. Champion vises can be elevated and lowered to meet the requirements of the workman.

Only one locking lever is required to lock the vise at any angle. It is constructed from material of the finest quality and is reinforced where mostly needed. The collar support abuts the edge of the bench and takes the strain off the lag screws when chiseling or hammering. The Champion Vise will hold any shaped work. Full line of machinists' vises also.

You should write for our catalog illustrating a complete line of Champion Shop equipment.
